Projects

Project: City Events Application
Description:A city events application showcasing upcoming events and information about the city.
Role and Responsibilities:

- Converted provided HTML, CSS, and JavaScript designs into ReactJS components.
- Utilized JWT for user authentication and authorization (signup and login functionality).
- Created an admin panel to allow admins to add and manage events.
- Integrated forms with validation to capture user messages and details.
- Implemented APIs to fetch and display event data on the interface.
